DETAILED ACTION

Drawings

1. The drawings received on December 27th, 2001 have been accepted by the Examiner.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-56 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawai (2001/0011355 A1) in view of Computer Networks by Larry L. Peterson and Bruce S. Davie.

Regarding Claims 1, 15, 29, and 43, Kawai teaches a memory in a battery unit (battery memory 9, figure 1) on an information handling device (information terminal) where a predetermined data word (password) is assigned to an available address in memory (password stored in battery memory, page 1, Paragraph 11), data is received in a non-programmable section of memory (reading first and second password, Page 1, Paragraph 13) and a programmable section of the memory is modified if the received data complies with the predetermined data word (comparing passwords and providing power to complete an access on main memory if the passwords match, pages 2-3, Paragraph 37-39). Kawai does not teach performing a checksum of the registers in the memory. Davie et al. teaches performing a checksum for error detection and confirmation purposes (Page 92-93). It would have been obvious to one of ordinary skill in the art at the time the invention was made to integrate the checksum of Davie et al. to the system of Kawai since such addition would make the system more secure and would allow for less errors

Art Unit: 2188

and more data protection. Figure 1 of Kawai teaches that the information handling device of the invention is enclosed within a processor.

Regarding Claims 2, 16, 30, and 44 Kawai teaches a communication section 8 within the information handling device (information terminal), which controls the communication between the battery unit 9 and other components. Since the communication section acts as a communication controller, it is understood that in enabling the reception of password data it multiplexes communication control signals along with the passwords that must be verified (Page 2, Paragraphs 33-35).

Regarding Claims 3-4, 17-18, 31-32, and 45-46, in performing a password comparison and adding the checksum function of Davie et al., the invention of Kawai in view of Davie et al. teaches performing security measures prior to modifying the programmable section of the memory (prior to providing power for a memory load or access, see Pages 2-3, Paragraphs 37-39 and Page 92-93)

Regarding Claims 5-7, 19-21, 33-35, and 47-49, Kawai teaches a communication section 8 within the information handling device (information terminal), which controls the communication between the battery unit 9 and other components. Since the communication section acts as a communication controller and controls the sending of data within the information terminal, communication section 8 can be considered to be a control hub (see Page 2, Paragraphs 33-35).

Regarding Claims 8-14, 22-28, 36-42, and 50-56, the buses of Kawai, shown on Figure 1 as communication paths, can be considered to be system management buses since they enable the exchange of data for system management purposes.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Midys Inoa whose telephone number is (703) 305-7850. The examiner can normally be reached on M-F 7:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mano Padmanabhan can be reached on (703) 306-2903. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
